

## IT Configuration Guide

### SPF Configuration:

- If an SPF record already exists on your DNS server, simply add `include:eventfarm.com` to the existing record
- Otherwise you will need to create new default TXT record with the following text: `v=spf1 mx include:eventfarm.com -all`

### DKIM configuration:

- For DKIM you will need to create a new Domain Key TXT record named `eventfarm._domainkey.YOURDOMAIN`.
- YOURDOMAIN should be replaced with your domain AFTER `www.`, and including `.com`, `.org`, `.net`, etc. An example using `eventfarm.com` is `eventfarm._domainkey.eventfarm.com`

If your DNS host requires an escaped key, the body of your record should contain EXACTLY:

- `v=DKIM1\; k=rsa\  
p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKBgQCtoCu  
Q3BOSXIkfdYa7oEG/Fy60hzPBDg6KJ56nS/sZJYtd2mcgZn  
GGMG2p0u3IUxzWEwAZzhM9zCABTdJNKnGbPRKMijsDeCV  
RBm8kF3BL2vZQbhkwlwDXETGxT4wja9wecztgxtleUrsuUo  
mdpKPXzupuSYVeSIMKs4Zd0BnPQIDAQAB\;`

If your DNS host does NOT require an escaped key, the body of your record should contain EXACTLY:

- `v=DKIM1; k=rsa;  
p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKBgQCtoCu  
Q3BOSXIkfdYa7oEG/Fy60hzPBDg6KJ56nS/sZJYtd2mcgZn  
GGMG2p0u3IUxzWEwAZzhM9zCABTdJNKnGbPRKMijsDeCV  
RBm8kF3BL2vZQbhkwlwDXETGxT4wja9wecztgxtleUrsuUo  
mdpKPXzupuSYVeSIMKs4Zd0BnPQIDAQAB;`

NOTE: If unsure of which to use, go with the first option (escaped key)
